925 words + 1 figures + 1 tables
March 23, 2012
ABSTRACT
The Transportation Research Board has unique and seemingly arbitrary requirements for manuscripts submitted for review. These requirements make it difficult to write the manuscripts quickly, and no existing \LaTeX{} style comes close to fooling the guidelines. This represents an initial effort at creating a template to meet the requirements of TRB authors using \LaTeX{}, Sweave, or other literate programming software.
INTRODUCTION
The Transportation Research Board (TRB) has unique and somewhat arbitrary requirements for papers submitted for review and publication. While the initial submission is required to be in PDF format, submissions for publication in Transportation Research Record must be in Microsoft Office format. On top of this, the manuscripts must be line-numbered, captions are bolded and employ atypical punctuation, and the references must be numbered when cited and then printed in order.

It is assumed that the readers of this document have some significant level of experience in \LaTeX \texttt{and} \texttt{bibtex}. As use of literate programming becomes more widespread in engineering and planning, it is possible that this template may need to be made more robust.

History
David Pritchard posted the original versions of this template in 2009 and updated it in 2011, soon after TRB began allowing PDF submissions. Gregory Macfarlane made significant adaptations to it in March 2012, allowing for Sweave integration and automatic word and table counts.

FEATURES
The template has a number of features that enable quick and painless manuscript authoring.

Title Page
The standard \LaTeX \texttt{\maketitle} command is not very versatile, so we have replaced it with a \texttt{titlepage} environment. This means that the writers will be required to manually enter spacings based on the number of contributors, but the current settings (0.5 cm between authors, 1 cm before and after them) seems to work well.

Near the bottom of the title page, TRB requires a count of the manuscript’s words, figures, and tables. This template creates these counts automatically. The figure and table counts are simply pulled from the \LaTeX counters using the \texttt{totcount} package. The word count feature is not as simple, as it utilizes a call to the system command \texttt{texcount}. Thus to compile the document writers must enable \texttt{\write18} in their \texttt{pdflatex} call.

Page Layout
The document has 1 inch margins as required, with the author’s names in the left heading and the page number in the right. The authors’ heading will need to be edited by the writers; automating this from the title page command is not currently possible. Paragraphs leading sections and subsections are not indented, while all subsequent paragraphs in that section are. Section types are defined as outlined by the Transportation Research Board (TRB).

The document is single-spaced in 12 point Times font. Times New Roman is a proprietary font and is therefore not available by installation in open-source software. While the differences between Times variants are negligible, Times New Roman itself can be used in Mac OSX by compiling under \texttt{xelatex}.

Line Numbers
Manuscript line numbering is implemented using the \texttt{lineno} package. There are options to change the font style and type, but the current settings work well. Note that the line numbers refresh each page, and that blank lines do not receive a number.
FIGURE 1 This is a random figure to test the counting functionality on the title page. It shows a Gumbel distribution with mode 0 and scale 1. The multinomial logit model assumes that the error terms are distributed identically and independently following this pattern.

CAPTIONS
Figure 1 shows a Gumbel distribution as an example of captioning. As demonstrated, figure captions ought to be sentence capitalized, bolded, and can be somewhat longer than in other journals.

Table captions are somewhat different, requiring initial capitals and are more of a title. An example of this is given in Table 1, showing the history of this template.

BIBLIOGRAPHY
The TRB bibliography style is defined in the trb.bst file which should be in your document folder. A new command is specified, \trbcite{} which will print the authors and the number of the reference in the order in which it is supplied. The References section will be appended to the end of the document.

It is very easy to add reference to papers programs written by Bierlaire (2) and Bierlaire (3) or to papers like those written by Garrow et al. (4) and Koppelman and Garrow (5). You can even go back and refer to Biogéme by Bierlaire (3) a second time.
TABLE 1 A History of this Template

<table>
<thead>
<tr>
<th>Version</th>
<th>Date</th>
<th>Author</th>
<th>Contributions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.0</td>
<td>Sep 2009</td>
<td>Pritchard</td>
<td>Initial Work</td>
</tr>
<tr>
<td>1.1</td>
<td>Mar 2011</td>
<td>Pritchard</td>
<td>Captions</td>
</tr>
<tr>
<td>2.0</td>
<td>Mar 2012</td>
<td>Macfarlane</td>
<td>Automation, documentation</td>
</tr>
</tbody>
</table>

TO DO'S

1. There is still work to be done on this template. Currently, the word count feature includes text in the abstract. It would also be cleaner if cited authors could be separated from their works. This may be possible currently, using the the \citeauthor{} and \citenum{} commands that are stuck together into \trbcite.

2. There may well be other important features in the template that we have not considered.

3. Ideally, we would make a trb.sty style class that could be called and we would not have to expose the user to so much \TeX-ese. This could be forthcoming, but not for this TRB cycle.

CONCLUSION

To make this document from source in a Unix-like OS, issue the following commands:

1. R CMD SWEAVE 'document.rnw'
2. pdflatex --shell-escape document.tex
3. bibtex document
4. pdflatex --shell-escape document.tex
5. pdflatex --shell-escape document.tex

6. The --shell-escape option is required to access the command line for the word count. Normally this feature is disabled because it is a route of entry for malicious software. Mr. Macfarlane promises that there is no such debilitating code in this document, and he encourages you to examine any scripts for suspicious code before permitting pdflatex from accessing your system.
